Drawings

The drawings are objected to because: element 55 is not shown. Also, Figs. 10-12B are of such poor quality as to render the features therein indefinite. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

The disclosure is objected to because of the following informalities: releasable bar "55" is disclosed. However, this number does not appear in the drawings.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 4-10,23,24 and 31-44 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one

Art Unit: 3634

skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The description of the cord lock of Figs. 7, 8a and 8b on page 11 is not understood. It is stated that when the stop portion 70 is at or near the bottom 72 of the housing, the stop portion "fits tightly" against the grooved track 68. However, it appears that this occurs at the top of the housing. The reverse is also stated. The space between 70 and 68 is said to grow larger as the stop portion 70 moves toward the top of the housing. This is difficult to understand how downward movement of the cord is achieved since the cord end is within the housing. It is not understood how this embodiment serves as a breakaway device.

Lastly, the features of the invention shown in Figs. 10-12B are indefinite due to poor drawings.

Claims 6, 9, 10 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 6 and 13, the stop portion is said to be "grooved to move along the grooved track". This suggests that the stop portion and the track are grooved so as to interact with each other, which is not the case.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 16-18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Okazaki.

See rotating portion 30 and locking mechanism 32 which may be considered to be a bar. The cord is released from the housing when the exposed end is pulled downwardly.

Claims 4-15 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Hirschy.

Allowable Subject Matter

Claims 19-30 are allowed.
